Francesco Paolo Dellaquila

Mobile Manager · Flutter · iOS · Android · AI-First & Machine Learning
Trani, Italy fp.dellaquila@gmail.com +39 345 385 5492 LinkedIn GitHub

PROFESSIONAL SUMMARY

Senior Mobile Engineer with over 8 years of experience designing and developing cross-platform and native applications — Flutter, iOS, Android — for clients in fintech, insurance, and enterprise. I take an AI-first approach to engineering: I integrate large language models (LLMs), agentic workflows, and prompt engineering techniques to boost team productivity and enrich the user experience of the products I build. Holding a Master's degree in Artificial Intelligence from Politecnico di Bari, I bring a systemic vision that combines solid mobile engineering, applied machine learning, and agentic AI design. Currently leading engineering teams and client-facing operations at Capgemini as Manager Consultant.

WORK EXPERIENCE

Capgemini · Bari, Italy **Manager Consultant** *09/2025 – Present*

- AI-Assisted Delivery: Driving AI-first development practices across the team: leveraging agentic AI tools and LLM-powered assistants to accelerate code generation, automated documentation, and incident triage — reducing time-to-delivery on iterative cycles.
- Team & Resource Management: Leading multi-disciplinary mobile development teams through feature delivery and incident resolution, coordinating engineers across Flutter and native Android/iOS codebases in an Agile environment to meet project deadlines.
- Client Engagement & Requirements: Running technical calls and stakeholder meetings to define requirements, clarify priorities, and align on project costs; translating business needs into actionable engineering specs, bridging product, QA, and backend teams.
- Cross-team Coordination: Acting as the key liaison between functional and technical groups, ensuring delivery alignment and fostering a culture of shared ownership, continuous improvement, and AI-augmented best practices.

Crispy Bacon · Milan, Italy **Senior Mobile Engineer · Team Lead** *2023 – 09/2025*

- Cross-platform & Native Development: Built production-grade mobile apps using Flutter and Dart for cross-platform delivery, alongside native iOS with SwiftUI and Swift and native Android with Jetpack Compose and Kotlin, for leading fintech, insurance, and enterprise clients.
- AI-Augmented Development: Introduced systematic use of AI coding assistants and prompt engineering into the team's workflow to accelerate scaffolding, refactoring, and code reviews — increasing development velocity and reducing technical debt.
- Architecture & Quality: Designed and enforced Clean Architecture and MVVM patterns across all projects, implementing BLoC for predictable state management and maintaining robust Unit Test coverage to ensure reliability at scale.
- Technical Leadership & CI/CD: Led task planning, code reviews, and knowledge-sharing sessions; mentored junior-to-mid engineers and managed CI/CD pipelines via Bitrise and Git, integrating REST API testing with Postman to validate and streamline delivery workflows.

ALTEN – Flowe (BCorp) · Milan, Italy **Senior iOS Engineer** *07/2022 – 12/2023*

- Fintech Banking App: Developed advanced features for Flowe — a BCorp prepaid card app — using SwiftUI and Swift 5, with a strong focus on performance, accessibility, and UX. Applied MVVM + Clean Architecture, Combine for reactive data flows, and Async/Await for modern concurrency management.
- Data Integration & ML Context: Contributed to the integration of ML-powered backend endpoints enabling personalised user experiences and contextual notifications, applying a data-aware approach to interface state management.
- Quality & Collaboration: Maintained high Unit Test coverage and collaborated within a cross-functional Agile squad via Azure DevOps and Git; used Postman for API contract validation and Xcode for profiling and performance tuning.

Links Spa – Banca Popolare di Sondrio · Milan, Italy **iOS Engineer** *01/2022 – 06/2022*

- SCRIGNOapp: Developed and maintained UIKit features in Swift 5 for SCRIGNOapp, a banking app enabling on-the-go account management and transactions. Managed builds via Jenkins CI, tracked issues in Jira, used SQLite for local data persistence, and ensured quality through Unit Tests and Bug Analysis tools.

Nextome · Conversano, Italy **Mobile Developer** *2019 – 12/2021*

- Indoor Positioning SDK & ML: Core developer of a BLE-based Indoor Positioning SDK built in Flutter, native Android, and iOS. The system integrated sensor fusion algorithms and machine learning models for position estimation, applying BLoC, MVVM, and MVC patterns to keep the codebase modular and testable.
- Data Pipeline & Analytics: Contributed to the design of the BLE signal data collection and preprocessing pipeline, feeding the training of positioning models with real-world data collected from deployed client devices. Managed artifact distribution via JFrog, automated pipelines with GitHub Actions, and used Firebase for analytics and crash reporting.
- Client Projects: Delivered custom apps and SDKs for Regione Puglia, Pinbike, Agrismart, and HITACHI Rails (Trentino and Genova); integrated REST APIs across all platforms and used SQLite for robust offline data persistence.

Implementa · Barletta, Italy **iOS Developer** *2020 – 2021*

- Nifra – Fashion Retail App: Developed a UIKit/Swift 5 app following MVC architecture to showcase and sell garments to end customers; integrated REST APIs via CocoaPods, managed a MongoDB-backed product catalogue, and used Git for version control.

Implementa · Barletta, Italy **Android Developer** *2018 – 2019*

- OMRI Optical – Retail App: Built a Java and XML Android app for eyewear sales and inventory management; used SQLite for local data persistence, Firebase for real-time sync, REST API integration for catalogue data, and Android Studio as the primary development environment.

Bermotech (Internship) · London, UK **Mobile Developer** *2017 – 2018*

- EdTech Apps: Built iOS and Android apps alongside web experiences to teach programming fundamentals to children, exploring adaptive learning approaches and interaction design to maximise engagement. Hired full-time upon completing the internship.

KEY PROJECTS

Indoor Positioning SDK – BLE + ML · Nextome **Mobile Developer · Core Team** *2019 – 12/2021*

- SDK Architecture & AI Integration: Designed and developed the core SDK architecture combining BLE signals with machine learning models for position estimation in complex indoor environments; ensured cross-platform compatibility across Flutter, Android, and iOS with distribution via JFrog.
- Training Data Pipeline: Built the signal data collection and preprocessing module, feeding real-world data from deployed client devices into the predictive model training pipeline.
- Critical Infrastructure Deployment: Deployed the SDK on real-world infrastructure including the HITACHI Rails network in Trentino and Genova and systems for Regione Puglia, meeting stringent reliability and positioning accuracy requirements.

Flowe – BCorp Banking App · ALTEN / Flowe **Senior iOS Engineer** *07/2022 – 12/2023*

- Fintech Features & Smart UX: Developed key iOS features for the Flowe banking app — transaction management, personalised contextual notifications, and user dashboard — applying MVVM + Clean Architecture and integrating ML-powered backend endpoints for personalisation.
- Reactivity & Concurrency: Implemented reactive data flows with Combine and asynchronous handling with Async/Await, ensuring a smooth user experience even under unstable network conditions and reducing UI response times.

TECHNICAL SKILLS

Mobile Development: Design and development of cross-platform and native applications on iOS and Android

Software Architecture: Definition of scalable architectures, advanced design patterns, and state management

AI-First Engineering: Integration of LLMs, AI agents, and agentic workflows into mobile products; prompt engineering and prompt design for automation and augmented UX; agentic AI approach to optimise development and delivery processes

Applied Machine Learning: ML and deep learning fundamentals applied to real-world systems; sensor fusion, training data pipelines, and integration of predictive models into mobile architectures

Quality & Testing: Automated testing strategies, code review, and code quality analysis

DevOps & CI/CD: Management of build, release, and monitoring pipelines in production environments

Technical Leadership: Team management, mentoring, tech lead, and stakeholder coordination in Agile contexts

Soft Skills: Problem solving, effective communication, operational autonomy, and priority management

Integrations & Full Stack: API integration, database management, and web interface development complementary to mobile

EDUCATION

2021 – 2023 **Master's Degree in Artificial Intelligence** · Politecnico di Bari

2018 – 2021 **Bachelor's Degree in IT Technology (Computer Science)** · Politecnico di Bari

2013 – 2018 **High School Diploma – IT Technical Expert** · ITT Fermi

CERTIFICATIONS & COURSES

Udemy **AI Engineer Agentic Track: The Complete Agent & MCP Course**
Udemy **Complete Agentic AI Bootcamp with LangGraph and LangChain**
Udemy **Machine Learning A-Z: AI, Python & R + ChatGPT Prize [2025]**
Udemy **GenAI in Action for Professional and Enterprise Use**
Udemy **ChatGPT Advanced PRO – Tips & Tricks**
Udemy **Python Pro – The Complete Guide, from Zero to Professional**
Udemy **Web Accessibility: Best Web Accessible UX Practices**
Udemy **UX Fundamentals: Practical Usability for Product Design**
Udemy **Flutter & MVVM**
Udemy **Writing Clean Code**
Udemy **Mastering RxSwift**
Udemy **iOS Bootcamp**
Cisco Networking Academy **Introduction to CyberSecurity**
